

## How to Measure Your Kitchen

*Follow the steps below and sketch your measurements on grid paper provided.*

### STEP 1. Sketch your floor plan & take pictures

- Use the grid paper provided. Measurements should be entirely in inches. (A wall that is 4' long, should be marked as 48" long)
- Measure the full width of each wall from corner to corner.
- Take pictures of each wall to share with your designer.

### STEP 2: Mark windows, doorways & other obstructions

- Measure the height and width of each door and window. Include the frame/molding in your measurement.
- Mark other obstructions like vents, radiators, and hood vents.

### STEP 3: Mark appliances

- If you're planning to keep any of your current appliances, measure their height, width and depth.
- Indicate where their center points are. The center point of an appliance will usually be the point where the gas line or plumbing line begins.
- If you're planning to purchase new appliances, provide the manufacturer and model information to your designer to ensure that your new cabinet layout will accommodate them.

### STEP 4: Mark plumbing lines

- Measure plumbing locations to the nearest wall.
- Indicate whether the sink drain goes into the floor or the wall.
- If you have a gas range, note the location of the gas supply line, or measure from the centerline of the range if the supply line is not visible.

### STEP 5: Mark electrical outlets & switches

- Mark the location of electrical outlets and light switches from the center of the outlet or switch to the nearest wall.

### STEP 6: Note ceiling height & soffit dimensions

- Note the ceiling height of the room.
- If you have soffits, measure their height and width.

### STEP 7: Double check!

- Make sure that the measurements of the individual elements in your drawing add up to the total dimension of each wall.
